

DISINFECTION AND STERILISATION SERVICE

COVID READY
KEEPING THE WORKPLACE SAFE

A unique touch-less disinfection system designed to kill 99.99% of harmful viruses and bacteria.

Utilising SanonDaf technology, the combination of both an innovative spraying technique and patented solution, enables the air and surfaces to be disinfected automatically, including those which you might be unable to reach using standard cleaning solutions.

Our disinfection and sterilisation service aims to prevent sickness and infection through touch-less disinfectant technology.

Sano Fog **TOTAL AREA DISINFECTION**

A complete surface disinfection - the unique fogging device transforms the disinfectant liquid into a dry fog upon spraying. This means it draws into every nook, crevice and corner, reaching surfaces further than the next best cleaning products.

Sano Static **SURFACE DISINFECTION**

Surface reach - the electrostatic device has a spraying nozzle which adds a negative electrostatic charge to the solution. This means that once our environmentally friendly disinfectant is sprayed, it surrounds and clings to all surfaces.

Our formula is:

- 100% environmentally friendly and poses no threat to humans, animals or plants
- Safe to use on electronic devices, equipment and fabrics without risk of damage
- Tested and proven to effectively eradicate a number of infections and bacteria including MRSA, C-Diff, E-Coli, Norovirus and flu virus strains.

Can be used in all industry sectors including:

- Office environments
- Transport sector
- Hotels
- Hospitals and doctors surgeries
- Assisted care facilities
- Schools/ Universities
- Nurseries/ day centres
- Catering environments
- Gyms and fitness centres
